

# Replace POTS Lines, Prepare for Smarter Life Safety Monitoring

Rising costs, increasing outages, and compliance risks mean now is the time to replace your POTS lines – and position your facility for the future of connected safety systems.

## Why Upgrade Now

Traditional copper phone lines (POTS) are being phased out nationwide. Each month that passes brings higher rates, reduced reliability, and growing risk of:

- **Service interruptions** that jeopardize monitoring reliability
- **Failed inspections** due to outdated communication paths
- **Rising costs** as carriers discontinue legacy infrastructure

## Benefits of the Upgrade

- **Lower monthly costs** by eliminating expensive phone lines
- **Stronger reliability** and faster signal transmission for emergency response
- **Peace of mind** with uninterrupted system monitoring
- **Future readiness** for connected monitoring and smarter life safety management

## Bonus Insight

Transitioning away from POTS lines also opens the door to emerging technologies – like **Honeywell Connected Life Safety Services (CLSS)** – that provide real-time visibility into your fire alarm systems and simplify how you manage maintenance, testing, and compliance across sites.

## Tech Electronics Makes It Easy

### Comprehensive expertise

in fire alarm, life safety, and communication systems

### Over 60 years of experience

helping organizations stay connected and compliant

### NICET-certified technicians

and dedicated local service teams

### Seamless upgrades

from POTS to IP or cellular monitoring with minimal disruption

### End-to-end support

from system assessment to installation and ongoing monitoring

## Replace Your POTS Lines Today!

Reach out to your rep to learn more about the upgrade and to schedule a system assessment.
