

Building Technologies that Connect & Protect

Integrated Systems. Safer Buildings. Smarter Protection.

Tech Electronics partners with architects and engineers to design life safety solutions that meet today's strict codes and standards while protecting what matters most.

Our Technology Expertise

Fire Detection Systems

Intelligent fire alarm systems, advanced smoke detection, and networked fire alarm platforms designed for code compliance, scalability, and seamless system integration.

Early Warning Fire Detection

Aspirating smoke detection and early warning technologies that identify developing fire conditions before traditional detection methods, helping protect mission-critical facilities and high-value assets.

Clean Agent & Special Hazard Suppression

Engineered suppression systems designed to protect mission-critical assets, high-value equipment, and occupied spaces while minimizing business interruption and collateral damage.

Mass Notification

Integrated emergency communication systems providing audible, visual, and distributed messaging to improve occupant awareness, emergency response, and code compliance.

Two-Way Emergency Communications

Code-compliant emergency communication systems supporting occupant assistance and first responder communications, including Area of Refuge and Firefighter Telephone systems.

Public Safety DAS/ERCES

In-building radio communication systems engineered to provide reliable first responder coverage and meet IFC, NFPA, and Authority Having Jurisdiction (AHJ) requirements.

Why Partner with Tech?

- Early design consultation & system recommendations
- Code expertise & regulatory support
- Budget planning & value engineering
- Product & manufacturer recommendations
- Seamless coordination from design to installation
- Local support you can count on

Industries We Serve

- | | |
|--|---|
|  Commercial |  Healthcare |
|  Construction |  Industrial |
|  Data Centers |  Life Safety |
|  Education |  Stadiums & Event Spaces |
|  Government | |

Have a Project Question?

Whether you're evaluating options, developing specifications, reviewing code requirements, or solving a unique design challenge, our technology specialists are available to assist.
