

Powerful Sound with Purposeful Design

Integrated Systems. Safer Buildings. Smarter Protection.

Tech Electronics partners with architects and engineers to design professional sound systems that deliver exceptional speech intelligibility, consistent coverage, and reliable performance across a wide variety of building environments.

Our Technology Expertise

Professional Sound Reinforcement

Engineered sound systems delivering clear, consistent audio coverage for auditoriums, worship spaces, gyms, cafeterias, and other large gathering areas.

Voice Lift Systems

Distributed microphone and speaker systems that naturally reinforce speech, improving communication in classrooms, lecture halls, training rooms, and conference spaces.

Sound Masking & Background Audio

Integrated sound masking and background music systems that improve speech privacy, reduce distractions, and create more comfortable environments.

Intercom, Paging & Public Address

Improve communication, security, and operational efficiency with integrated intercom and paging systems designed for facility-wide connectivity.

Assisted Listening Systems

Code-compliant listening technologies that improve accessibility for individuals with hearing loss while supporting ADA requirements and enhancing the user experience.

Acoustical Design Consultation

Design guidance focused on speaker placement, room acoustics, and system performance to help achieve consistent audio coverage and exceptional speech intelligibility.

Why Partner with Tech?

- System design & acoustical consultation
- Architectural-friendly solutions that fit the vision
- Budget planning & value engineering
- Product & manufacturer recommendations
- Integration with AV, paging, and life safety systems
- Local support from design through commissioning

Industries We Serve

- | | |
