

Better Partnership. Better Projects.

Simplifying Technology Coordination from Preconstruction to Closeout

Complex building technologies can create scope gaps, coordination challenges, and schedule risk when they aren't addressed early. Tech Electronics works alongside General Contractors to bring multiple specialized technology systems under one experienced partner—helping improve coordination, clarify responsibilities, and keep projects moving from preconstruction through closeout.

Helping Manage the Scope

Preconstruction Support

Review technology requirements, budgets, specifications, and project needs to help establish a clear path forward.

Scope & Responsibility Review

Identify scope gaps, overlaps, infrastructure requirements, and trade responsibilities before they create project issues.

Design & Constructability Coordination

Review system requirements against project conditions to identify potential conflicts and coordination needs.

Trade Coordination

Coordinate pathways, power, interfaces, device locations, schedules, and dependencies across technology systems and other trades.

Project Execution

Dedicated project teams manage installation, programming, testing, and system requirements while coordinating with the overall construction schedule.

Commissioning & Closeout

Manage system testing, documentation, training, commissioning, and turnover requirements to support a smoother project closeout.

Why General Contractors Partner with Tech:

Fewer Subs. Less Coordination.

Reduce Scope Gaps & Change Orders.

Specialized Expertise at the Table.

One Point of Accountability.

Protect the Project Schedule.

Complete Commissioning & Closeout.

Have a Project to Discuss?

Whether you're in preconstruction, evaluating technology scopes, or managing an active project, Tech can help simplify coordination and reduce technology-related project risk.
